### Parlor Palm

*Chamaedorea elegans*

Height: 7 feet

Spread: 4 feet

Sunlight: ● ●

Hardiness Zone: 10a

Other Names: Neanthe Bella Palm, Parlour Palm, Bamboo Palm

#### Description:

A very popular plant that is low maintenance; graceful fronds arch out from central stems, creating an elegant patio or garden setting; great for low light areas; do not overwater; protect from frost, move indoors to overwinter

#### Planting & Growing

Parlor Palm will grow to be about 7 feet tall at maturity, with a spread of 4 feet. It has a low canopy with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 10 years.

This tropical plant does best in partial shade to shade. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It is not particular as to soil type or pH. It is quite intolerant of urban pollution, therefore inner city or urban streetside plantings are best avoided. This species is not originally from North America. It can be propagated by cuttings.

Parlor Palm makes a fine choice for the outdoor landscape, but it is also well-suited for use in outdoor pots and containers. Because of its height, it is often used as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
